DETAILED ACTION

This Office action is in response to application papers filed on 30 July 2003.

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Method of Manufacturing a Semiconductor Device with Penetration Electrodes that Protrude from a Rear Side of a Substrate Formed by Thinning the Substrate.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 24, the term "or peeled off from" does not particularly point out if the organic film is being peeled off from the substrate, from the support member, or from both the substrate and the support member.

Claims 2-10 are rejected under 35 U.S.C. 112, second paragraph, because they depend on claim 1.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hua et al., Nakano, Gurtler et al., Goldstein, Gaul, Furukawa et al., Siniaguine, and Nemoto et al. teach methods of forming electrodes through a semiconductor substrate that feature forming a blind via in the substrate, filling the via with conductive material, and thinning the back surface of the substrate to expose the conductive material. Lauterbach et al. teach a method of forming an electrode through a semiconductor substrate that features forming a blind via in the substrate, using an adhesive layer to attach an auxiliary substrate to the top surface of the substrate, thinning the bottom surface of the substrate to expose the via, and subsequently filling the via with conductive material.
